

# Congratulations! You are now the proud owner of a genuine traffic light finder!

Originally created for the straight windshields on cars of the 1920's and 1930's, your new traffic light finder is an authentic reproduction of this popular accessory.

1. Place traffic light finder to left and just below your line of vision on inside of windshield, to suit your preference.
2. Affix suction cup to glass. Moisten and press.

**NOTE:** When driving into the sun, you may prefer to raise your traffic light finder into the horizontal position. This is the purpose of its rounded top piece next to suction cup.
